PROFESSIONAL SUMMARY

Backend Engineer specializing in distributed systems, microservices architecture, and blockchain-integrated applications. Proven track record of designing scalable RESTful APIs, implementing secure authentication pipelines (JWT/OAuth2), and deploying containerized services with Docker. Strong foundation in event-driven architecture using Apache Kafka and Spring Cloud ecosystem. Seeking to leverage deep Java/Spring Boot expertise to build high-performance backend systems.

EDUCATION

Mehran University of Engineering & Technology (MUET)

B.S. Computer System Engineering

CGPA: 3.22 / 4.00

Dec 2022 – Dec 2026

Jamshoro, Pakistan

TECHNICAL SKILLS

Languages:	Java, SQL
Frameworks:	Spring Boot, Spring Security, Spring Data JPA, Hibernate, REST APIs
Microservices:	Spring Cloud, Apache Kafka, API Gateway, Config Server, Service Discovery
Databases:	MySQL, PostgreSQL, MongoDB
DevOps & Tools:	Docker, Git, GitHub
Security:	JWT Authentication, OAuth2, Role-Based Access Control (RBAC), Keycloak
Blockchain:	Ganache, IPFS, Smart Contract Integration, Decentralized Verification
AI/ML:	LLM Integration, Prompt Engineering, OpenAI API

PROJECTS

Microservices-Based Fitness Tracker

Java, Spring Boot, Apache Kafka, Keycloak, PostgreSQL, Docker

- Architected a scalable microservices ecosystem using Spring Cloud Config, API Gateway, and Apache Kafka for real-time activity event streaming across distributed services.
- Engineered OAuth2/OpenID Connect authentication and authorization using Keycloak, implementing role-based access control for multi-tenant user management.
- Containerized 5+ microservices with Docker Compose, achieving consistent deployment across development and staging environments.

Library Management System with Payment Integration

Java, Spring Boot, Stripe API, Hibernate/JPA, MySQL

- Integrated Stripe Payment Gateway for automated fine collection and membership subscription handling, ensuring PCI-compliant transaction processing.
- Designed and implemented secure RESTful APIs for inventory management, transaction tracking, and user administration with comprehensive input validation.
- Optimized database operations using Hibernate/JPA with custom query tuning, reducing average API response time by 40%.

Blockchain-Based Degree Verification System

Java, Spring Boot, MySQL, Ganache, IPFS, JWT Authentication

- Developed a secure blockchain-integrated platform for validating academic credentials, eliminating document forgery through decentralized verification.
- Integrated IPFS for decentralized document storage and Ganache for local blockchain transaction simulation and testing.
- Implemented JWT-based authentication with Role-Based Access Control (RBAC) for secure multi-role system access (students, universities, employers).

EXPERIENCE

Web Development Intern

6 Weeks | 2025

Pakistan Engineering Forum (PEF) – MUET Chapter

- Collaborated with a cross-functional development team to maintain and enhance the organization's web platform serving 500+ active users.
- Participated in full Software Development Life Cycle (SDLC) including requirements gathering, implementation, code review, and deployment.
- Contributed to both frontend and backend development tasks while improving team collaboration and Agile workflow proficiency.
